

## **mSE Solutions Enters Alliance with Leading Supply Chain Decision Support Provider**

### **Strategic partnership with AI software expert LLamasoft**

The Munich-based consultants, mSE Management Solutions and System Engineering, have entered into a strategic partnership with LLamasoft, the leading provider of AI-based software for supply chain analysis and optimization. The collaboration combines the specific supply chain expertise of mSE and the powerful AI-based cloud platform llama.ai from LLamasoft. Together, the focus is on designing a digital end-to-end platform for supply chain management.

mSE Solutions, one of the pioneers in the consulting and implementation of end-to-end optimized supply chains, is continuing its growth course with the strategic partnership with the software provider LLamasoft. mSE is contributing its decades of experience and innovative strength in integrating and implementing global process chains to the partnership. With llama.ai, LLamasoft provides a future-oriented, AI-supported analysis and optimization platform as a basis for this.

llama.ai components are integrated into mSE's digital end-to-end SCM platform and are supplied with daily updated, relevant data from ERP systems and other sources. Thanks to this combination of AI/ML, optimization, and simulation engines, which is the most comprehensive in the industry, the basis for fast and precise analysis of the data and the subsequent optimization of relevant supply chain processes is created.

"With mSE, we gain a partner who shares our vision of digital decision support for the value chains of the future. With mSE and LLamasoft, companies will be better prepared for the various challenges in their global business activities in the future and will be better enabled to master disruptions," emphasizes Michael Wallraven, Managing Director LLamasoft Deutschland GmbH.

This overcomes traditional silos based on function and location and creates a true end-to-end view of a companies' global supply chain. Analyses and scenarios allow intelligent and fast decisions along the extended supply chain across strategic, tactical, and operational time horizons.

With this holistic approach, companies learn how their supply chains should operate to achieve their profitability, service, and growth objectives. Even more, the supply chain becomes a strategic advantage when organizations can respond quickly to increasing customer demands, dynamic business models and the ever-changing market.

Klaus Imping, CEO of mSE Solutions explains: "Since the foundation of mSE Solutions we have been pursuing the idea of cross-location and cross-functional

process integration. The strategic partnership with LLamasoft opens up new growth potential and helps us to realize our vision of end-to-end supply chains in global organizations".
